Project Timeframe

What to Expect

The contractor will have heavy equipment on the roads to facilitate stream reconstruction. Traffic will at times be delayed as temporary traffic control measures may be in place in the areas of work. Work will also be progressing within the channel. Residents can expect to see heavy equipment within the channel removing the existing walls.

During this portion of the project, there will be no pedestrian or vehicle access across the box culvert (shown inside the red box on the attached map) that allows water to flow underneath John Cross Drive.
