

June 16, 2021

Beginning as early as June 17, 2021, ARCP, on behalf of Halifax Water, will be installing concrete baffle walls within the stormwater watercourse that runs alongside Coronet Avenue to reduce the velocity of the water flow in some areas. The work will require stormwater bypass pumping. This work has been approved following consultation with Nova Scotia Environment.

This work will take two to four weeks to complete, weather depending and will include property reinstatement/restoration work as needed.

Construction & Contractor Work During COVID-19

During this project, from time to time, you will see workers within 2 metres of each other while they work to maintain the critical water, wastewater, and stormwater infrastructure serving your home. Halifax Water is still mindful of the recommendations to maintain a 2 metre distance between employees and contractors, and every effort will be made to achieve this. However, some tasks cannot be completed safely otherwise. As an essential service, in these instances, Halifax Water and its contractors have been exempt from the 2 metre social/physical distancing rules. Halifax Water and its contractors will use additional PPE to protect themselves when undertaking these activities.

We ask that residents please ensure they give construction crews at least 2 metres of distancing as well.
