

March 31, 2022

Halifax Water, through its contractor, Landmark Structures Co., is constructing a new water storage reservoir to better serve your community. The new water reservoir is being constructed at Halifax Water's existing property on Masthead Court in Bedford.

Upcoming Work

All welding on the steel structure is complete. The next planned work on-site includes sandblasting and applying primer and then finish coats on the interior and exterior of the reservoir. The interior and exterior coating work is anticipated to start in May 2022, with the interior to be complete in mid-July 2022 and the exterior complete by the end of June 2022.

The reservoir inlet and outlet piping installation is anticipated to start by early April, and be complete by mid-April.

Fencing and site reinstatement is currently planned for mid-July after completion of the reservoir coating, with the reservoir being substantially complete in August 2022.

To ensure the safety of our communities and our staff, please maintain a safe distance when Halifax Water staff or contractors are working in your area.
