

May 6, 2022

Halifax Water, through its contractor, Landmark Structures Co., is constructing a new water storage reservoir to better serve your community. The new water reservoir is being constructed at Halifax Water's existing property on Masthead Court in Bedford.

Upcoming Work

All welding on the steel structure is complete. The next planned work on-site includes sandblasting, priming and finish coats on the interior and exterior of the reservoir. Sandblasting and priming on the exterior of the reservoir is anticipated start on Wednesday, May 11, 2022. The exterior sandblasting and priming work will take approximately three weeks to complete. The sandblasting and priming on the interior of the reservoir will start after the exterior is complete and is anticipated to take three weeks to complete. Once the interior sandblasting and priming are complete final coatings will be applied to the interior and exterior of the reservoir.

The reservoir inlet and outlet piping installation is complete with a small amount of excavation for new electrical conduits remaining.

Fencing and site reinstatement is currently planned for July after completion of the reservoir coating, with the reservoir being substantially completed in August 2022.

To ensure the safety of our communities and our staff, please maintain a safe distance when Halifax Water staff or contractors are working in your area.
